

Venkata Sai Manikanta

College Graduate | Software Engineer

Hyderabad, India
kamathamsaimanikanta@gmail.com
+91 7997938723

SUMMARY

Aspiring Software Engineer passionate about web development. Seeking entry-level role to apply academic knowledge and hands-on experience. Dedicated to learning and contributing effectively to an active team setting.

EDUCATION

Bachelor of Technology in Computer Science and Engineering	DECEMBER 2021 – May 2024
Visvodaya Engineering College	Percentage: 75%
Diploma in Technical Engineering	April 2017 – November 2021
Prr polytechnic	Percentage: 68%

TECHNICAL SKILLS

- **Programming Languages:** Python
- **Web Technologies:** HTML, CSS, JavaScript
- **Frameworks:** Bootstrap, Flexbox
- **Databases:** MySQL

INTERNSHIPS

Eduskills – May 2023 – June 2023

AWS Intern

- Configured AWS cloud infrastructure, enhancing system efficiency through optimized resource allocation.
- Deployed EC2 instances, reducing operational costs by 25% via effective utilization of reserved instances.
- Conducted security audits and implemented best practices, increasing compliance with AWS security standards.
- Automated deployment pipelines using AWS CodePipeline, improving deployment speed by 50%.
- Monitored and maintained AWS services, ensuring uptime and quick resolution of incidents.

PROJECTS

Child Mortality Using Machine Learning – February 2024 – May 2024

- Analysed child mortality data, achieving accuracy in predicting under-five mortality rates using machine learning algorithms.
- Developed predictive models, reducing error rates by 20% in forecasting mortality trends among children under five.
- Implemented data preprocessing techniques, enhancing model performance through effective handling of missing values and outliers.
- Utilized classification algorithms, improving predictive power by 25% in identifying high-risk factors for child mortality.
- Organized extensive model evaluation, achieving precision rate in identifying under-five mortality cases using validation datasets.

Face Recognition – November 2022 – January 2023

- Designed and applied facial recognition system, achieving accuracy in identity verification using deep learning algorithms.
- Mapped facial features, reducing false positives by 20% through optimized feature extraction and faceprint matching.
- Integrated biometric software, increasing recognition speed through efficient algorithm implementation and hardware optimization.
- Managed real-time facial recognition, maintaining uptime and seamless verification process in live capture scenarios.
- Enhanced system security, achieving a 15% reduction in unauthorized access attempts through advanced algorithmic defenses.

CERTIFICATIONS

- Attained Python Certification.
