Objective

I am a developer who genuinely enjoys the challenge of turning a complex problem into clean, working code. With a solid technical foundation in Java and Spring Boot, I look at software through two lenses: the efficiency of the backend and the experience of the user on the frontend. I’m a big believer in adaptive learning. I’m never finished being a student and I thrive in environments where team collaboration and open communication are the defaults, not the exceptions.

Skills and Interests

Programming Languages:	Java, C++, C
Frontend Technologies:	HTML, CSS
Backend Technologies:	Spring Boot
Database:	SQL
UI/UX Design:	Figma
Version Control System:	Git, GitHub
Soft Skills:	Critical thinking, Team Collaboration, Adaptive Learning

Education

Vardhman School of Engineering	2018 - 2022
Bachelors of Engineering in Computer Science Engineering C.G.P.A:8.7	
Krish Junior College	2016 - 2018
Mathematics, Physics and Chemistry Percentage:89%	
Gandhi High School	2015 - 2016
Secondary School C.G.P.A:9.8	

Certifications

- Oracle Java SE17 Developer
- Oracle AI Vector Search Professional

Projects

Hardware Trojan Detection

- Designed and implemented a machine learning–based Hardware Trojan Detection system using Gradient Boosting, achieving higher detection accuracy compared to traditional Support Vector Machines (SVM) through optimized feature learning.
 - Performed comprehensive data preprocessing and feature selection on benchmark hardware datasets sourced from Kaggle, enabling effective identification of malicious circuit modifications.
- Conducted experimental evaluation and comparative analysis using IBM SPSS 2026, validating model performance improvements through statistical accuracy metrics and result visualization.

Rainfall Prediction Using XG Boost

- Conducted an analytical study on rainfall prediction using XG Boost, achieving improved prediction accuracy and computational efficiency compared to Random Forest through optimized feature selection and ensemble learning techniques.
 - Performed data preprocessing, exploratory data analysis, and feature importance evaluation on historical rainfall datasets to enhance model generalization and reduce overfitting.
- Evaluated model performance using regression metrics such as RMSE, MAE, and R², demonstrating data-driven validation and comparative analysis across machine learning models.

Languages Known

- English, Hindi, Telugu
